

Catching variation during fieldwork on Nakh-Daghestanian languages

George Moroz, Samira Verhees

Linguistic Convergence Laboratory, NRU HSE

26 November 2019

Investigating variation [Dorian 2010: 3]:

“Two equally interesting questions are at the heart of this book: how an extraordinary degree of idiosyncratic linguistic variation can coexist with an extraordinarily homogeneous speaker population, and how linguists might overlook the possibility of their coexistence.”

According to [Eckert 2016] there are three waves of Variationism:

- [Labov 1963] on Martha's Vineyard /ai/ ~ /au/, [Trudgill 1974] on Norwich speech, [Wolfram 1969] on Detroit Afro-American speech

Data were collected from

- 44 speakers (Upper Andic, Northeast Caucasian) during the fieldwork in 2019 in Zilo (Botlikh district, Dagestan)

Created with [lingtypology](#) [[Moroz 2017](#)]
